

Thank god it's

ASHTON · TATE 

Get it all done by Friday!

Meet Friday!

It's the new microcomputer program that comes in handy any day of the week.

With Friday!, you can quickly turn your paper files into electronic files. Then just about anybody in your office can use them, because your computer does most of the work.

You've never seen a program this sensible

Friday! does more than file handling systems selling for as much as \$495.

It handles mailing lists and invoices and paychecks and sales and inventory and input screens and reports and just about anything that needs to be done.

It's quick and easy to use because it's menu-driven and talks to you in plain English. It simply asks what you want to do, then takes you through the steps to get it done.

And to make sure you get started off on the right foot, we've included a complete step-by-step tutorial. It includes sample files with data and instructions on how to get the most out of Friday! any day of the week. So you can get the most out of your computer right from the start.

Now doesn't that make a lot of sense?

A circle is the shortest distance between two points

Some menu-driven programs make you work your way through menu after menu before you can start doing anything. And even more menus when you want to stop.

So for those of you who don't want to play "menu wars," we built Friday! circularly.

RETRIEVE DATA

A—Edit or view records

B—Quick report

C—Custom report

D—Custom options

E—Mailing labels

M—Main menu

What do you want to do? []

- Friday! is the easiest to use, most powerful microcomputer file handling system you've ever seen.
- Set up an "electronic file" without even peeking at the manual.
- Find any filed information in seconds, even if there are thousands of entries in the file.
- Sort files on up to 5 different items at the same time.
- Change the structure of a file with a few keystrokes, without losing any data.
- Display or print quick reports from all or part of a file.
- Prepare professional-looking custom reports laid out just the way you want them, quickly and easily.
- Set up your system to perform automatic calculations when data is being entered or when reports are being printed.
- Password protection keeps your confidential data confidential.
- Create form letters and merge with mailing lists that Friday! maintains.
- Make handy mailing labels any way you want them.

Meet Friday!

It's the new microcomputer program that comes in handy any day of the week.

With Friday!, you can quickly turn your paper files into electronic files. Then just about anybody in your office can use them, because your computer does most of the work.

You've never seen a program this sensible

Friday! does more than file handling systems selling for as much as \$495.

It handles mailing lists and invoices and paychecks and sales and inventory and input screens and reports and just about anything that needs to be done.

It's quick and easy to use because it's menu-driven and talks to you in plain English. It simply asks what you want to do, then takes you through the steps to get it done.

And to make sure you get started off on the right foot, we've included a complete step-by-step tutorial. It includes sample files with data and instructions on how to get the most out of Friday! any day of the week. So you can get the most out of your computer right from the start.

Now doesn't that make a lot of sense?

A circle is the shortest distance between two points

Some menu-driven programs make you work your way through menu after menu before you can start doing anything. And even more menus when you want to stop.

So for those of you who don't want to play "menu wars," we built Friday! circularly.

And you can stop any job you're doing and go directly to any other job any time, just as you would with paper files. Friday! works like people do.

Which is why so many people say: thank god it's Friday!

You're not locked in

Friday! encourages improvement and change.

So you can change your mind in the middle of a project without having to throw in the towel. You can change entries, records and entire file structures without knowing a thing about programming and without losing any data. Change the formats of your input screens. Change the layouts of your reports. Just tell Friday! what to do and Friday! goes to work.

And you're not locked out

Friday! is the file handling system made for everyone, so it runs on just about every microcomputer

known to man (under CP/M-80, CP/M-86, PC-DOS² or MS-DOS³). And does it for a mere \$295 (suggested retail price).

It works with other software, too. With WordStar⁴ With 1-2-3⁵

And best of all, Friday! works with dBASE II.[®] So as your business grows and you need a full-fledged database system, you can grow into the one that has set the standards for information management on a micro.

Quite simply, Friday! is the office assistant you've been waiting for. Experience it in your nearest Ashton-Tate dealer showroom.
